

SECTOR MIMO HV 17dBi/5GHz

New sector antennas for base stations in the MIMO technology developed for use with radio equipment operating in the 802.11n standard that use MIMO technology.

Key Features

- 2 integrated antennas: allow to use 802.11n to increase the theoretical bandwidth up to 300Mbps
- patch matrix lacquered: reliable performance in all weather conditions

Technical Data

product code	INT-SEC-17/5X-HV
frequency	5150-5850MHz
impedance	500Hm
VSWR (max)	2.0
polarization	horizontal and vertical
gain	17dBi
front to back ratio	> 26dBi
port separation	> 44dBi
lighting protection	shorted for DC
dimensions (without mounting)	450x225x40mm
weight (with mounting)	1.5kg
connector	N female
mounting diameter	38...51mm
